

## Memorandum of Understanding with Urdhvam Environmental Technology Pvt. Ltd. Pune (MoU)

(June 15, 2021)

Department of Geology, Shri Shivaji Science College, Amravati signed Memorandum of Understanding (MoU) with Urdhvam Environmental Technologies Pvt. Ltd., Pune for groundwater studies. The purpose of the MoU is to promote mutually beneficial partnership between the parties in the field of geology. Awareness and exploration of the relationship between geology, groundwater and people, and a better understanding of the earth sciences.

## Groundwater Management and Groundwater Science Online Training Program (4 days)

(July 16 to July 19, 2021)

Department of Geology, Shri. Shivaji Science College, Amravati in collaboration with Urdhvam Environmental Technology Pvt. organized online training program on Groundwater Management and Groundwater Science. In this training, 46 students registered in Google registration form and 35 successful trainees were also given certificates. The purpose of this training was to provide information and awareness on groundwater management and groundwater science. The training was imparted by Mr. Bakre, CEO, Urdhvam and his colleagues.

### Need of The Training program and outline of Program:-

Groundwater constitutes about 89% of the total fresh water resources in the planet. But in recent years, due to over exploitation of ground water and erratic nature of monsoon, there has been depletion of ground water across the world. Depletion of ground water has reached to the extent that it is virtually impossible to get the water table back. Even though there is a possibility of recharge of water from the other areas, the process is very slow and may take one year to replenish one meter. In view of this management of ground water has become one of the most significant issues in recent times. The efficient management of ground water resources through market mechanism has become difficult. In the training program the concept of

sustainable ground water management, factors affecting ground water availability, different approaches towards developing and using available ground water with out adversely affecting the hydro-geological balance was taught. The strategies for sustainable groundwater management, including development of aquifers, rainwater harvesting and artificial recharge methods were shown hands on.
